CoolPro™ brand HD46 and HD100 are fully formulated ISO VG46 and VG100 grade polyalkylene glycol lubricants designed specifically for applications with HFO refrigerant 1234yf in mobile air conditioning (MAC) systems. The product is a speciality double end-capped PAG, and is manufactured to exacting standards of high double end-capping efficiency that is compatible with HFO-1234yf refrigerants.

- ❖ Optimised miscibility in HFO-1234yf.
- ❖ Superior lubricity compared to alternative lubricant types, including standard 'single endcapped' PAG products, and di-capped PAGs with lower di-capped material content.
- ❖ Exceptional Viscosity Index (VI) – The high VI enhances compressor life by ensuring efficient running at temperature extremes. The high VI may also allow the user to select a lower viscosity fluid than typically used, with associated power usage savings.
- ❖ Good high temperature and chemical stability, even in presence of water, resulting in system lifetime extension and reduced maintenance costs.
- ❖ Low hygroscopicity (tendency to absorb moisture) compared to alternative PAG products with lower di-capping content.
- ❖ Formulating expertise – Shrieve ZEROL HD46 and HD100 series contain optimised additive technology to provide additional corrosion protection within the a/c system, to further enhance the extreme pressure and antiwear performance of the PAG, and to maximise fluid lifetime by ensuring against thermal or oxidative deterioration of the lubricant.
